The Homeowner's Guide to Outage-Ready Backup Power

Everything Upstate SC homeowners need to know about connecting a portable generator safely and legally.

connected

Why Your Generator Is Only Half the Solution

You bought a generator. Smart move. But right now it's sitting in your garage waiting for a storm. When that storm hits at 2 AM, what's your actual plan?

Run extension cords through a cracked window? That gets you a fridge and a lamp. Maybe your phone charger. That's it.

What extension cords can't power: Your well pump. Your HVAC. Your sump pump. Anything on a 240-volt circuit.

The real solution: connect your generator directly to your breaker panel through a code-compliant inlet and interlock system. One cord. Full panel access. Done in a morning.

You already spent \$800 to \$2,000 on that generator. It's 90% of the way there. The inlet and interlock connection is the last piece that makes it actually work the way you imagined when you bought it.

The 3 Ways to Connect a Generator

	Extension Cords	Transfer Switch	Inlet + Interlock
Safety	Dangerous Risk	Safe Good	Safe Good
Power	A few outlets	Pre-selected circuits	Your entire panel
Cost	Free (cords you own)	A larger investment	Custom quote
Permit	No	Yes	Yes (we handle it)
Install	None	Full day	One morning
Best For	Emergencies only	Unlimited budget	Most homeowners Best Value

What Actually Happens During an Install

People imagine a huge project. It's not.

1

Mount the Inlet Box

Weatherproof power inlet on your exterior wall, near your panel.

2

Install the Interlock Kit

Mechanical interlock prevents main and generator breakers from both being on.

3

Wire It Up

Heavy-gauge wire from inlet to a dedicated breaker in your panel.

4

Test + Walkthrough

We fire it up and walk you through the whole process.

 Inlet box

 Interlock

 Full install

Usually about 4 hours. Most installs done by lunch.

The Permit Question

"Do I really need a permit?" Yes. And here's why that's a good thing.

- ✓ **Insurance protection.** Unpermitted electrical work can void your claim.
- ✓ **Home resale.** Unpermitted work shows up on inspections.
- ✓ **Safety check.** County inspector confirms everything is right.

You don't deal with any of it. We pull the permit, schedule the inspection, handle the paperwork. All included.

5 Questions to Ask Before You Hire Anyone

1

Licensed electrical contractor?

Not a handyman. Not a GC. A licensed electrician.

2

All-in price?

Materials, labor, permit, inspection, cleanup. No surprises.

3

They pull the permit?

"Pull it yourself" is a red flag.

4

How many have they done?

You want someone who does this regularly.

5

Guarantee?

Code-compliant, county-inspected, workmanship guaranteed.

Backup Power Pro answers yes to all five.

Ready to Get Connected?

Three steps. One morning. Full power for the next storm.
